ADDENDUM 2

DATE: February 12, 2018
PROJECT: CYF Heat Exchangers
ITB NO: 744-B1806-CYF Heat Exchangers
OWNER: The University of Texas Health Science Center at Houston
TO: Prospective Proposers

This Addendum forms part of and modifies Proposal Documents dated, January 25, 2018, with amendments and additions noted below.

1. Questions and Responses:

   1) Question: With respect to the location of the existing isolation valves at the head of the exchanger, if the valves are too close to allow retrofit of the new exchangers, what will be required so that we can price accordingly?

      Response: The new heat exchanger is shorter than the old exchanger. If the back of the unit is placed in the same location as the back of the old unit, will it not make enough room to make that transition?

   2) Question: With respect to attempting to keep half of the equipment online at all times during the project, if the metal in the header below the two pumps is compromised to a point of needing to be replaced, what will be required for the system so we can price accordingly?

      Response: The contractor will need to schedule a full shut-down of the heating system to replace that pipe with Brooks Clinton. This will likely be weekend or after-hours, depending on the length of time the contractor feels is needed to replace the pipe. This should be coordinated with the weather to not replace this pipe during a cold snap under 45 degrees.
