ADDENDUM 1

DATE: 2/12/2019
PROJECT: MSB Gross Anatomy Dissector Lights
ITB NO: 744-B1910
OWNER: The University of Texas Health Science Center at Houston
TO: Prospective Bidders

This Addendum forms part of and modifies Bid Documents dated, January 24, 2019, with amendments and additions noted below.

1. I am looking to see if you have the estimated cost available for this project.
   a. We are expecting the contractor’s to provide the cost and rely on the competitive market to provide the best value.

2. Regarding the disposal and documentation of proper disposal of the existing lights, could I request more information as to the following:
   - What is the ODR to whom we are to document the proper disposal? Will they be looking for specific forms relating to the disposal?
     a. PM/ODR is the Project Manager. A waste manifest of any items being disposed that are required to be recycled. Lamps, ballast, etc.
   - My research indicated the bulbs will be disposed of one way, but the light fixtures themselves can we disposed of via a metal recycling company. Are there any other considerations for decontamination of the existing lights we need to factor in due to their long-term exposure to formalin fumes?
     a. No special considerations for fixture handling or disposal.

3. Will a dumpster be provided by the facility to discard old lights and for new light packaging?
   a. No. However, dumpster delivery and placement must be coordinated with the owner’s rep in advance.

4. The removal of ceiling tiles is not by light contractor. Who will be responsible for removing ceiling tiles before light removal and new light installation takes place?
   a. Awarded contractor will be responsible for removing ceiling tiles.
5. Is a dimensional drawing showing where the new lights are to be installed in the ceiling, i.e., will the lights be installed directly above the center of the dissecting tables or will they need to be offset from center of tables and the articulating arms will extend to the other end of table? Please provide required mounting location in relation to dissection tables. The new lights are replacing track mounted lighting.

   a. New lights will be installed to existing structure. Articulation shall cover the area where the dissector tanks are located. If further clarification is required, owner will clarify with awarded contractor.
