

Join us for a 10x Genomics event

Go where single cell has never gone before

DATE & TIME

June 27, 2023

11:00 AM – 12:00 PM CT

LOCATION

Zoom Webinar

As studies grow in scope and ambition, advances in technology are making it possible for researchers to take their single cell experiments further than ever before. Chromium Single Cell Gene Expression Flex provides our most sensitive whole transcriptome profiling with the ultimate flexibility to meet your research needs every step of the way. Uncover critical cellular insights with advanced, probe-based chemistry that expands sample access to include fresh, PFA-fixed, and FFPE tissues. Run assays on your schedule and simplify experimental logistics with optimized, scalable workflows that enable you to store and transport samples without losing data quality. This powerful protocol further streamlines your studies with sample batching and multiplexing that improves efficiency, limits variability, and reduces per-sample costs by up to 75%.

Join our event to learn how Gene Expression Flex lets you do more with single cell RNA-seq, expanding the depth at which you can investigate dynamic biological systems.

SPEAKERS

Ashley Benham
Sales Executive
10x Genomics

Brandon Mistretta
Field Application Scientist
10x Genomics
