Dr. Eric Boerwinkle identifies genes linked to Alzheimer’s

Far too many families know the heartbreak of Alzheimer’s — a disease about which we know far too little. But that’s changing.

By identifying the genes that influence Alzheimer’s, Dr. Boerwinkle and his team are working to develop more targeted medicine to someday prevent genetic diseases altogether.

We all want to live healthier, longer lives. So our community of experts works tirelessly to solve the greatest health challenges of our time.
