Dr. Lorraine Frazier is uncovering how depression impacts heart disease

A patient’s mental state and physical health may seem unrelated. Yet, patients who have had a heart attack and suffer from depression have twice the risk of having a subsequent heart attack.

Dr. Frazier and her team research genetics, inflammatory proteins and depression data to reveal which heart disease patients may need treatment to minimize the risk of depression and heart attack.

The mind-body connection still holds unsolved mysteries. So our community of experts works tirelessly to solve the greatest health challenges of our time.
