The UTHealth School of Public Health protects and improves the health of individuals, families, communities and populations locally and globally through outcomes research and comparative effectiveness of healthy lifestyle interventions.

We Are...

1 SCHOOL

The first school of its kind in the state.
The highest ranked school of public health in the southwest.

6 REGIONAL CAMPUSES

The only school in Texas with regional campuses aligned with health disparities across the state. Students can attend class at any of the six campuses via Interactive Television.

- Houston
- Austin
- Brownsville
- Dallas
- El Paso
- San Antonio

LEADING LIFE-CHANGING PUBLIC HEALTH INITIATIVES

HOUSTON: Building a first-of-its-kind nutrition hub in the Texas Medical Center
AUSTIN: Launching the Tobacco Regulatory Science Center
BROWNSVILLE: Using big data and cutting edge technology to address obesity and diabetes in the Rio Grande Valley
DALLAS: Leading the Maternal and Child Health Training Fellowship Program
EL PASO: Developing innovative community health worker projects along the U.S.-Mexico border
SAN ANTONIO: Evaluating the prevalence and cause of hearing loss and auditory injuries in the military for the Department of Defense

"The School of Public Health is investing in proven programs and new initiatives that make a tangible impact on the health of people around the world. My challenge to you is to become an example to others – arouse and stir your friends and neighbors to action."

– Dr. Raymond S. Greenberg, The University of Texas System Chancellor for Health Affairs

WORKING WITH YOU TO

Improve the State of Health in Texas and Beyond

PIONEERS IN PUBLIC HEALTH

Dr. Craig Hanis is the first in the world to discover one of the genetic bases for diabetes among Mexican-Americans.

The Robert Wood Johnson Foundation awarded the City of Brownsville its prestigious Culture of Health Prize and credited our regional school campus for making the city healthier via innovative programs, such as its campaign to address chronic disease prevention.

The Coordinating Center for Clinical Trials’ landmark 2002 blood pressure medications study found that water pills matched or outperformed higher-priced alternative medications.

Dr. Stephen Linder is leading the Cities Changing Diabetes study, a global initiative aimed at reducing diabetes in urban communities. The study uses data from the School of Public Health’s 2010 Health of Houston Survey — Greater Houston’s first household survey evaluating the unmet health needs of adults and children.

The new interventions developed by Drs. Stephen Kelder and Deanna Hoelscher for childhood obesity have reached nearly 500,000 children and families in Central Texas and reduced obesity rates significantly.

Many Ways to Give

There are many ways to make a difference:

- Student Scholarships and Fellowships
- Faculty Professorships and Chairs
- Research Funds
- Dean’s Excellence Fund

Through

- Outright One-time Gifts and Multi-year Commitments
- Endowment Gifts
- In Honor/Memory of Tribute Gifts
- Planned Gifts through your will, retirement plan assets, charitable trusts and charitable gift annuities
- Matching Gifts
