Don’t underestimate your ability to contribute to a positive workplace by using manners more often. They can be easy to forget in a busy day and to omit in daily interaction with others. Although there are many civilities we practice in the workplace, nothing is more powerful than showing appreciation to coworkers. Thank them for their hard work, compliment their achievements, and acknowledge their contributions to the team. When all employees do this, you will notice its effect in creating a positive and supportive environment and an uplifted attitude in those around you.

It’s spring, so enjoy it! But prevent injuries as you get out and about participating in leisure, recreation, sports, and yardwork. This includes using protective gear and the right tool for a specific job. Many injuries can be prevented by taking the extra minute necessary to stop what you are doing, take a breath, and get the right tool, eye protection, a longer cord, or a better ladder to eliminate risk of injury. Surprising fact: There are 85,000 lawnmower injuries reported each year!

Information in FrontLine Employee is for general informational purposes only and is not intended to replace the counsel or advice of a qualified health or legal professional. For further help, questions, or referral to community resources for specific problems or personal concerns, contact a qualified professional. Add “http://” to source links to follow. Spring break can be a fun and exciting time for students, but it can also present several dangers. The primary risks are associated with drug and alcohol use, sexual assault, harassment, violence, and auto/pedestrian accidents. It’s important that students are aware of these risks and how to protect themselves or properly respond to them. If you are a loved one of a college student, don’t shy away from the parental or guardian role of offering information that may help prevent tragedy. Research shows that young people do hear and listen to what their parents say, although they may not experience validation at the moment this information is shared.

Life is a series of positive and negative events. Accepting the downs with the ups and moving forward is a resiliency skill. Experiment with the following resilience strategy if frustrating or negative experiences keep you distressed for too long: 1) Understand it is natural to experience negative events more acutely than positive ones. 2) When you face an adverse experience, reflect on past experiences, how you got through them, and how time and patience played a role in overcoming the event. Decide the present negative experience will be no different. 3) Recognize what’s going well in your life. Doing so is a strong counterbalance to negative emotions. 4) Hit the brakes! Refuse an adverse event’s power to pull you into a downward spiral. 5) Embrace uncertainty: Life is unpredictable, and there will always be highs and lows. This mindset reinforces your ability to navigate whatever comes your way in the future. (Note: Tracking your progress reinforces the strategy.)

Sweeping advances in technology and artificial intelligence (AI) are making many employees nervous. Are you feeling anxious about AI eliminating your job or that of a loved one? Predictions you hear in the media may be overblown. Feel less anxious by understanding steps you can take to stay employable as technology advances, but also be aware of misconceptions related to AI. Stay informed about the latest trends affecting your industry to help you realistically assess any potential impact. Also, upskill and reskill—identify what’s in demand in your field, subject area, etc. and seek training to remain competitive so you have the ability to adapt to change. AI is advancing, but experts say AI can’t replicate the true creativity of human beings right now. AI also lacks emotions and the ability to understand and respond to human emotions. Humans can make decisions based on intuition and gut feelings, but AI does not. AI is only algorithms. AI is not “flexible.” Its operation is consistent with its programming, whereas humans can adapt to new and unexpected situations. Change is always certain, but managing change is often best accomplished by embracing it and being open to new ways of working within it. This frees up your energy to think creatively about your place in a changing organization. As technology advances, don’t remain isolated. Find ways to network and build relationships within your field. Doing so will keep you connected and in front of new opportunities that can advance your future.

Can You Identify Pre-Burnout?

It’s not burnout yet, but do you have “precursor symptoms?” Preventing burnout is not a willpower exercise. And “a vacation” won’t do it. It takes focus and some self-nurturing changes. A few early warning signs include noticing a lack of energy and feeling tired most days; difficulty staying focused on tasks; a surprising inability to self-motivate, deliver, or complete tasks on time; mild forgetfulness; awareness of loss of enjoyment from work; noticing a lack of productivity compared to an earlier time; being slower at responding to the needs of others at work; and feeling edgy, tense, and more easily “triggered.” Other signs exist, so consider an assessment with a counselor or your employee assistance program and gain self-care skills unique to your life or situation to prevent burnout.

Preventing College Spring-Break Tragedies

Spring break can be a fun and exciting time for students, but it can also present several dangers. The primary risks are associated with drug and alcohol use, sexual assault, harassment, violence, and auto/pedestrian accidents. It’s important that students are aware of these risks and how to protect themselves or properly respond to them. If you are a loved one of a college student, don’t shy away from the parental or guardian role of offering information that may help prevent tragedy. Research shows that young people do hear and listen to what their parents say, although they may not experience validation at the moment this information is shared.
